

Autumn 2023

ALTA GENETICS BEEF

UNDERSTANDING BEEF EBVs

| BIRTH | | | |
|---------------------------|-----------------|--|---|
| Calving Ease Direct | % | Genetic differences in the ability of a sire's calves to be born unassisted from 2yr old heifers | Higher EBVs indicate fewer calving difficulties in 2yr old heifers |
| Calving Ease Daughters | % | Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age | Higher EBVs indicate fewer calving difficulties in 2yr old heifers |
| Gestation Length | days | Genetic differences between animals in the length of time from the date of conception to the birth of the calf | Lower EBVs indicate shorter gestation length |
| Birth Weight | kg | Genetic differences between animals in calf weight at birth | Lower EBVs indicate lighter birth weight |
| GROWTH | | | |
| 200 Day Growth | kg | Genetic differences between animals in live weight at 200 days of age due to genetics for growth | Higher EBVs indicate heavier live weight |
| 400 Day Growth | kg | Genetic differences between animals in live weight at 400 days of age | Higher EBVs indicate heavier live weight |
| 600 Day Growth | kg | Genetic differences between animals in live weight at 600 days of age | Higher EBVs indicate heavier live weight |
| Mature Cow Weight | kg | Genetic differences between animals in live weight of cows at 5yrs of age | Higher EBVs indicate heavier mature weight |
| Milk | kg | Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam | Higher EBVs indicate heavier live weight |
| FERTILITY | | | |
| Days to Calving | days | Genetic differences between animals in the time from the start of the joining period (ie when the female is introduced to the bull) until subsequent calving | Lower EBVs indicate shorter time to calving |
| Scrotal Size | cm | Genetic differences between animals in scrotal circumference at 400 days of age | Higher EBVs indicate larger scrotal circumference |
| CARCASS | | | |
| Carcass weight | kg | Genetic differences between animals in hot standard carcass weight at 750 days of age | Higher EBVs indicate heavier carcass weight |
| Eye Muscle Area | cm ² | Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400kg carcass | Higher EBVs indicate larger eye muscle area |
| Rib Fat | mm | Genetic differences between animals in fat depth at the 12/13th rib site in a 400kg carcass | Higher EBVs indicate more fat |
| Rump Fat | mm | Genetic differences between animals in fat depth at the P8 rump site in a 400kg carcass | Higher EBVs indicate more fat |
| Retail Beef Yield | % | Genetic differences between animals in boned out saleable meat from a 400kg carcass | Higher EBVs indicate higher yield |
| Intramuscular fat | % | Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400kg carcass | Higher EBVs indicate more intramuscular fat |
| STRUCTURE | | | |
| Claw Set | score | Genetic differences between animals in claw set | Lower EBVs indicate a more desirable structure |
| Foot Angle | score | Genetic differences between animals in foot angle | Lower EBVs indicate a more desirable structure |
| Leg Angle | score | Genetic differences between animals in rear leg structure when viewed from the side | Lower EBVs indicate a lower leg angle score (straighter angle through hock joint) |
| TEMPERAMENT | | | |
| Docility | % | Genetic differences between animals in temperament | Higher EBVs indicate better temperament |
| FEED EFFICIENCY | | | |
| Net Feed Intake (Feedlot) | kg/day | Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase. | Lower EBVs indicate more feed efficiency |

CULMINATION

011AN02260

K C F Bennett Culmination

- ▲ This bull adds it all up in one package
- ▲ Exceptional calving ease, breed leading performance and carcass merit
- ▲ Female sexed semen available
- ▲ Top 1% 200D + 400D growth, Milk, CW, + Indexes

THREE RIVERS

011AN02263

Ellingson Three Rivers 8062 PVPV

"Ellingson Three Rivers is a real breeding bull, and we can't recall being this excited about an AI sire's calves. We've had no calving issues with these calves out of our females.

The Three Rivers calves are structurally very correct with a great depth of rib, plenty of thickness, a huge amount of muscle and are heavy boned. The calves have strong, broad muzzle and heads, while the heifers retain femininity and the bulls masculinity. They have plenty of presence about them and a soft hair & skin type.

We are currently extremely happy with how the Three Rivers calves are performing."

Little Meadows Angus; The Golding Family

- ▲ Breed leader for weaning & yearling growth
- ▲ Sires big bodied, stout made, high performing cattle
- ▲ Top 1% Foot Angle + Top 3% Claw
- ▲ Popular high performance sire with exceptional structure - Top 1% growth EBVs, CW, \$A-L
- ▲ Calves impressing breeders

March 2023 TransTasman Angus Cattle Evaluation

For additional synchronization protocols visit BeefRepro.org

HEAT DETECTION & TAI

For best results perform AI 12 ± 2 hr after detection of estrus.
Use of estrus detection aids (EDA) is highly recommended.

Select Synch & TAI

Heat detect & AI days 6 to 10 and TAI with GnRH all non-responders 72 - 84 hr after PG.

Select Synch+CIDR® & TAI

Heat detect & AI days 7 to 10 and TAI with GnRH all non-responders 72 - 84 hr after PG.

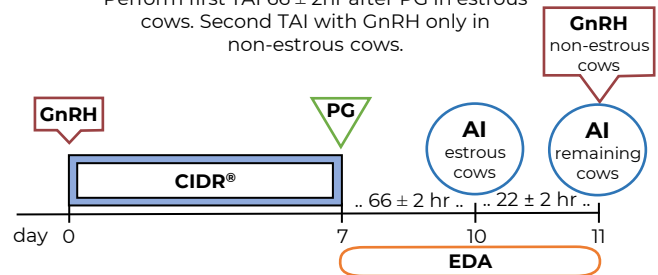

PG 6-day CIDR® & TAI

Heat detect & AI days 0 to 3. Insert CIDR to non-responders, heat detect & AI days 9 to 12. TAI with GnRH non-responders 72 - 84 hr after CIDR removal. *Protocol may be used in heifers.*

7-day CO-Synch+CIDR® & Split-TAI

Perform first TAI 66 ± 2hr after PG in estrous cows. Second TAI with GnRH only in non-estrous cows.

FIXED-TIME AI

Time for Fixed-time AI (TAI) should be considered as the approximate average time of insemination based on the number of females to inseminate, labor, and facilities.

7-day CO-Synch+CIDR®

Perform TAI with GnRH at 60 to 66 hr after PG.

7&7 Synch

Perform TAI with GnRH at 66 ± 2 hr after CIDR removal.

5-day CO-Synch+CIDR®

Perform TAI with GnRH at 72 ± 2 hr after CIDR removal. Two injections of PG 8 ± 2 hr apart are required for this protocol.

Bos indicus PG 5-day+CIDR®

Perform TAI with GnRH at 66 ± 2 hr after CIDR removal.

- OPTION 2** 400kgs as a feeder
- OPTION 3** 750kgs as a finished 350 DOF

For livestock purchase enquiries, please contact Delta Wagyu.

DELTA WAGYU GENETICS

Delta Wagyu is the genetics arm of Binnie Beef, and are leaders of wagyu genetics, excelling in cattle for commercial profitability, tailoring cattle production to both domestic and export markets. It is our philosophy to use the best genetics, keeping the genetic progress simple & cost-effective.

Delta Wagyu is a family owned and operated business based in the foothills of the Barrington Tops, North of Singleton. Over the years, we have sold very large quantities of semen into the worlds largest dairy supply chains in Europe, NZ and China. We also supply bulls into the tropics, and have an obsession with achieving high fertility semen and bulls.

BINNIE BEEF

The Binnie family have been operating in Australian Agriculture since 1835. Based on 7,000 acres of prime cattle breeding country renowned for lush pastures, crystal clear spring fed creeks and natural rye grass or clover pastures in the heart of the Hunter Valley.

After a century of registered Hereford breeding, cheese production, dairy manufacturing, and draft horse breeding on Mirannie Station, Steve and Liz Binnie took on this family legacy in 2004, moving solely into Wagyu cattle breeding and direct to restaurant beef sales.

Today the business consists of thousands of Wagyu Animals, a specialist Wagyu genetics company, and two global beef brands (a free range and grain fed program) enjoyed in the worlds best restaurants from Shanghai, to Singapore, Sydney, London, Paris, and now also sold from the flagship Binnie Beef Warehouse, based at 144 Parry Street Newcastle.

P: 02 4067 5305 E: sales@deltawagyu.com
