**Alta**

Create Value ▲ Build Trust ▲ Deliver Results

To our valued clients,

## WELCOME TO THE 2026 LINEUP OF ALTA BEEF SIRES.

We're committed to **Create Value, Build Trust, and Deliver Results** with every recommendation we make. By combining practical selection tools with advanced data and technology, we support producers in making informed, economically sound genetic decisions.

The year 2025 will be remembered as extraordinary across the beef industry. Every sector—from purebred sales to commercial calves—experienced historic market strength. The value generated by thoughtful breeding and management decisions has never been more evident. Recent years have further reinforced several key lessons:

**FIRST**, consumers are clearly expressing their expectations through their purchasing behaviour. They want a safe, high-quality beef product, whether enjoyed at home, in grocery stores, or at restaurants. Demand for a wholesome, nutritious eating experience continues to deliver value throughout the supply chain, including to the producers who make it possible.

**SECOND**, genetics now play an even greater role in capturing value. Commercial cattlemen seek bulls and females that excel in economically relevant traits, while feedlots prioritize cattle that stay healthy, gain efficiently, and meet the requirements of value-added programs.

**THIRD**, artificial insemination—our industry's original AI—has never been more impactful. Time after time, AI-sired cattle outperform and outsell those bred by natural service. Likewise, females bred to AI sires consistently command higher premiums. Artificial insemination remains one of the most powerful tools available for improving herd performance and profitability.

We invite you to review the sires featured in our directory and identify those that best align with your breeding objectives. We are proud to present a diverse range of genetics from leading programs locally and globally.

Our team of breeding advisors are available to assist with sire selection, synchronization protocols, and the integration of a successful AI program within your operation.

And now is an ideal time to invest in superior genetics that can advance your program and enhance long-term returns.

Thank you for your interest in all that Alta has to offer. We're proud to be part of the URUS family, united by the mission to create **Better Cows for a Better World**.

March 2026 TransTasman Angus Cattle Evaluation

The best way to make your cowherd truly efficient, and your calf crop earn more, is to use Leachman \$Profit™. This is the only index in the industry that works on both sides of the ledger (production AND cost). ***Cows that work! Steers that pay!***

### How \$Profit works

\$Profit assumes that the average commercial bull will have 100 progeny over its lifetime. The model assumes that you keep 30% of your heifers as replacements and that you retain ownership on the remainder of the calves through finishing and sell on a grid. We realize that many

don't retain ownership, but doesn't it make the most sense to select from birth all the way to slaughter? Feedlots have already proven their willingness to pay premiums for superior Leachman sired calves.

Our simulation model then factors in all of the effects on both income and expense to come up with a net profit figure for each bull. \$Profit allows you to compare any two bulls and calculate the difference in profit that they are expected to generate in your herd. Let's compare a

\$10,000 \$Profit bull to \$6,000 \$Profit bull (the average 2008 born Angus bull). The predicted difference between the bulls is \$4,000 or about \$40 per calf. \$Profit works for us and it will work for you too.

### What traits are included in \$Profit

\$Profit includes nearly every trait that impacts profitability. The effect of most traits on profit is fairly simple to understand. Here is the list of what is included and its effect:

#### Revenue Traits

- Calving ease = more calves
- Weaning and yearling EPD = more weight
- Fertility (days to conception) = more weight and more calves
- Carcass weight = worth more up to 1050 lbs.
- Marbling = valued based on grid premiums
- Ribeye area = value as impacts yield grade
- % Retail Product = more yield is more meat

#### Cost Traits

- Cow mature size = in general bigger eats more
- Cow intake = more intake costs more
- Feedlot feed efficiency = cost of gain

Some traits are not so easily characterized for \$Profit. Milk, for example, is a good thing until you get too much. When over +25, milk EPD has a more negative effect on fertility than it has a positive effect on weaning weight. There are a few traits not yet included in \$Profit: longevity, structure, and disposition. These traits are important but difficult to express in dollars.

## Leachman financial indexes allow you to HAVE IT ALL!

### \$Ranch

Profit from birth through weaning.

Includes:

- Fertility, Milk, Growth
- Cow feed intake and mature size

### \$Feeder

Profit from weaning to harvest.

Includes:

- Feed conversion
- Carcass value
- Carcass weight

### \$Profit

Puts it all together: \$Ranch + \$Feeder

***One number that predicts your bottom line!***

The Rissington herd, established in 1936 at the family Ellerton property in New Zealand, has built a distinguished reputation for breeding high-performance Angus cattle. Over the decades, the herd has embraced cutting-edge technologies to drive genetic progress and enhance profitability.

Recent years have seen substantial investments in advanced tools such as Vytelle Feed Efficiency testing, Genomics, In Vitro Fertilization (IVF), and Sexing Technologies. These innovations have propelled the Rissington herd to new levels of genetic improvement, ensuring competitiveness in today's dynamic agricultural landscape.

Participation in the \$Profit Global Multibreed Analysis has further fortified the herd's breeding program by integrating extensive phenotypic data from like-minded seedstock operations worldwide. This evaluation allows the herd to benchmark its profitability against global standards, ensuring its long-term viability and competitiveness.

The Rissington herd stands as a beacon of tradition and innovation in Angus breeding, embodying a commitment to excellence. By continually pushing the boundaries of genetic advancement and contributing to the cattle industry's progress, the herd sets a standard to underpin sustainable and forward-thinking agricultural practices.

## GENETIC EVALUATIONS

Our genetic evaluations are at the heart of every breeding decision we make. We unashamedly continue to collect a large volume of data on our cattle for over 25 individual traits. For many decades this data got fed into the relevant breed association databases for Angus & Simmental in the early days, a multibreed for the Profit Maker. The weakness of this was that we could not compare across breeds & only within.

Fast forward to today. We still send our Angus, Simmental & Charolais data, including genotypes to the relevant breed associations for analysis, but more importantly, all this data, including genotypes, no matter what the breed composition of the animal, goes into the Leachman \$Profit Global Multi-Breed Evaluation.

The Leachman \$Profit analysis

- 1.5 million beef animals with annual contributions of over 35k
- 75,000 high density, 50k SNP profiles complement pedigree & performance data
- Over 40,000 animals with individual feed intake records
- Genomic Enhanced BV's & Indexes

We are very aware that more data can get overwhelming and confusing, yet what commercial farmers want to know is which bull(s) will make them more money.

The \$Profit Indexes Leachman runs simulate actual outcomes based on the genetic inputs that impact revenue and cost. It makes a partial budget. The outcome of \$Profit analysis is it allows us to measure, rank and select our cattle for profitability. It also now allows commercial farmers to leverage this on their own cattle through Inherit Select.

# ACCELERATE GENETIC GAIN

*with embryos*

**Our sister company PEAK, is an industry leader in bovine genetics and your ultimate source for embryos to fit all needs!**

Whether your goals are to create top-notch female donors or high producing herd replacements, we have you covered!

PEAK embryos are produced at first-class flush facilities that specialize in producing high-quality fertile embryos with the best conception in the business.

## WHAT CAN YOU EXPECT?

- ◆ Access to embryos produced from both breed leading bulls and females
- ◆ All Embryos are created by In-Vivo or IVF embryo production methods
- ◆ Angus embryos available

Vintage Rita 0404

**Ask your Alta rep about current availability and how to include PEAK embryos in your custom genetic plan.**

Alta and PEAK are part of the URUS family of companies.
